Well Analysis Corp.

Production Logging And Wireline Services

5500 Woodmere Drive

P.O. Box 20008,

Bakersfield, California 93390-0008

Office 1 661 589 0760 Fax 1 661 589 6822

GeoLog Solutions Inc.

APPLIED GEOPHYSICAL TECHNOLOGY

Cased Hole Analysis Tool:

Is a measurement system that provides data for reservoir analysis. Identifies reservoir fluid types, gas, oil, water, and measures porosity formation relative density behind casing. The modular design of the 'Cased Hole Analysis Tool' makes it possible to configure effective measurement combinations for a wide range of well conditions and logging objectives.

Features:

- Modular Design
- Measurement Compatibility
- Data Format
- Measurement Reliability
- Analysis

Applications:

- Primary Porosity Measurements
- Depletion Monitoring of Producing Reservoirs
- Evaluation of Potential Reservoirs
- Coal Bed Methane Applications
- Horizontal Well Bore Logging
- Steam Flood Evaluation And Monitoring
- Problem Well Diagnostics
- Dry Well Bore Logging
- Gravel Pack Evaluation

About Well Analysis Corporation

General Information

Well Analysis Corporation (WAC) opened for business in October, 1990 with three logging units. Each unit contained analog equipment. We had one contract, Shell Oil Company. WAC has seen steady growth since the business began, even though the industry was indolent. We contribute this to the quality of service that WAC provides; WAC is now the largest production logging company on the west coast, with our home office based in Bakersfield, California. Additional offices

are located in Los Angeles and Ridgecrest, California. We have logging units, in-house drafting and log reproduction, and a complete machine shop which produces our down-hole electronic tools. An Electronics Engineer is on staff to

repair and manufacture electronic boards for tooling. WAC is committed to a full time R&D department.

Service History

WAC has completed numerous projects including Gas Storage Field Projects, Steam Injection Projects, Water Flood and Disposal Projects, Fluid Entry Surveys, Noise Logging Projects and Geothermal Well Logging. WAC has provided services all over the Western United States, both on and off-shore and Internationally. As the industry has become active again, WAC is growing to meet the needs of our customers. Our long term goals are to maintain company base and expand into numerous areas with new products.

What Does Well Analysis Corporation Do ?

A Brief List of Services Offered

- Complete Wireline Services
- Complete Electric Line Services
- Complete Logging Trucks
- Offshore Skid Units
- Portable Mast Units
- Complete Line Of Production Logging Tools
- Water Injection Surveys
- Temperature Surveys
- Fluid Entry Surveys
- D.O.G. Required Surveys
- Caliper Surveys
- Audio Detection Surveys
- Steam Injection Surveys
- Cased Hole Analysis Tool
- Geothermal Surveys

Fabrication Department

The fabrication department consists of a complete machine shop with the capability to construct down hole logging tools, offshore skid units and portable mast units. We are also adept at modifying any equipment necessary. Our in-house fabricator can manufacture high quality tools and equipment in a minimal amount of time. Thus enabling WAC to sustain a high level of quality while

meeting the needs of an active and growing industry.
